

Founded in 1987, Family Physicians Group was created to ensure you receive the most comprehensive, preventative and proactive health care services from a team of experts.

Our health care model includes you, your family, a primary care physician, hospitalist, case manager and social worker and results in a personalized care plan that focuses on your lifestyle and unique medical needs.

Family Physicians Group
"YOUR PATIENT-CENTERED MEDICAL HOME"

The Family Physicians Group Difference

Family Physicians Group is Central Florida's leading patient-centered medical home. With more than 20 locations to serve you, we offer comprehensive care and services to help you manage your health and maintain your well being.

We are committed to helping our home-bound and chronically ill patients reduce emergency room visits and unnecessary hospitalizations. By offering our services in the comfort of your own home, FPG's physicians deliver the treatments and support you need to manage complex conditions.

Our At-Home Care Services Are...

Comprehensive

FPG's integrated care program allows you to develop a valuable relationship with your primary care provider and specialists. After spending time in your home, your doctor will develop a treatment plan that complements your lifestyle, health status, environment, family dynamics and finances. This unique service results in optimal care for your physical and emotional health.

Convenient

Our at-home physicians are available to provide you the care and support you need when an office visit is not feasible due to transportation challenges or health status. We are dedicated to helping you regain your health where you feel most comfortable – at home.

Thorough

Family Physicians Group's at-home physicians strive to create a level of intimacy and understanding that is difficult to achieve in an office or hospital setting. Whether that means spending 20 minutes or an hour in your home, your comfort and care are our top priority.

Our At-Home Medical Team...

- Focuses on treating and managing the chronic disease process.
- Administers an intensive home evaluation to address the requirements of your condition.
- Fosters trust with you and your family and encourages involvement in the care process.
- Conducts regular home visits to assess your progress and adjust your care plan to ensure the best recovery.
- Provides a monthly review of your progress.
